COLLAGEN PEPTIDES

Collagen peptides have various benefits for the skin, bones, joints, and muscles. They can improve skin condition, increase collagen production, prevent bone loss, increase muscle mass, and reduce joint pain. They may also help with constipation and immunity. Some studies have shown that collagen peptides can reduce inflammation and improve joint function in arthritis and osteoarthritis

VITAMIN C

Vitamin C is an essential nutrient for collagen synthesis, a complex set of chemical reactions that produce collagen, a protein that provides strength and structure to the skin and other tissues.

ALPHA LIPOIC ACID

Alpha-lipoic acid is a naturally occurring antioxidant in human body and has been widely used as an antioxidant clinically. Accumulating evidences suggested that α-lipoic acid might have immunomodulatory effects on both adaptive and innate immune systems.

VITAMIN B12

B12 might play an important role in cellular immunity. Vit B12 acts as an immunomodulator for cellular immunity. Vitamin C stimulates neutrophil migration to the site of infection, enhances phagocytosis and oxidant generation, and microbial killing.

L-GLYCINE

Glycine makes up around 33% of the collagen in the human body. It helps to break down and transport nutrients and fat to cells throughout the body. That makes it essential to most of your bodily systems, including the immune, digestive, and nervous systems.

HYALURONIC ACID

Hyaluronic acid is a clear, goeey substance that is naturally produced by your body. It is also known as Nature's Moisturizer. The largest amounts of it are found in your skin, connective tissue, and eyes. Its main function is to retain water to keep your tissues lubricated and moist.

CHONDROITIN

Chondroitin sulfate is a chemical found in human and animal cartilage. It is one of the building blocks of cartilage and is beneficial for preventing osteoarthritis, a condition where the cartilage in the joints breaks down. Taking chondroitin sulfate might slow this breakdown.

MAGNESIUM AND ZINC

Magnesium is one of the minerals that can help your body produce collagen. When your body makes collagen, it combines amino acids — nutrients you get from eating protein-rich foods — and uses vitamin C, zinc and magnesium.

As we age our bodies stop producing collagen. **Reapian Medical Prebiotic Collagen Plus** helps to put it back. It is ideal for men and women. Daily use will reveal your younger and more energetic self. Our prebiotic enhanced highly bioavailable hydrolyzed collagen complex is fortified with additional amino acids, vitamins, minerals and co-factors to replenish, re-synthesize and protect newly formed collagen.

BIOAVAILABLE COLLAGEN PROMOTES AND IMPROVES

Smooth Skin

Stronger Hair

Eye Health

Joint Repair

Stronger Nails

Plump Lips

- It is ideal for men and women
- Prebiotic fibre makes you feel fuller for longer and speed up metabolism
- Help improve digestion and prevent constipation
- A scientific combination of vitamins and minerals to enhance collagen synthesis
